

INNOVATOR SPOTLIGHT

Hällnäs Handelsträdgård

Hällnäs, Sweden

INSIDE HÄLLNÄS HANDELSTRÄDGÅRD

Impossible Results in Extreme Environments

Located just south of the Arctic Circle in Northern Sweden, Hällnäs Handelsträdgård is a producer of a variety of bedding and potted leafy greens, herbs and ornamental flowers. Started in 1953 growing herbs and lettuce, the company now operates out of a modern production facility and went 100% organic in 2016.

Because of its year-round colder climate and almost no natural light during the months of December and January, Hällnäs Handelsträdgård relies on supplemental light to increase its plant production.

“We are seeing reduced lead times and higher yields under the Fluence LED systems, with finished product quality that exceeds everything we have seen before.”

BJÖRN ISACSSON
OWNER

Hällnäs Handelsträdgård's Fluence-Powered LED Greenhouse

The company deployed Fluence's VYPR Series with PhysioSpec Greenhouse spectrum for full-cycle plant growth and development, along with Fluence's VYPR Series with AnthoSpec as a finishing spectrum to increase anthocyanin accumulation in lettuce. This resulted in a deep red color and higher antioxidant properties which was previously impossible to produce under HPS or sunlight. Since Hällnäs Handelsträdgård replaced its HPS lighting system with the Fluence VYPR Series, the company has experienced:

VYPR

21% REDUCTION
IN LEAD TIME

INCREASED ENERGY
EFFICIENCY

INCREASED
OVERALL YIELD

IMPROVED
QUALITY

REDUCED
SHRINK

MORE ACCURATE
